Santiago Paz

AI Engineer | RAG, Agents & Multi-Agent Systems | 11+ years

Senior Software Engineer | AWS Bedrock

Berlin, Berlin, Germany

Summary

I'm a software engineer with 11+ years of experience, deliberately moving into AI engineering, taking LLMs into production and integrating them into real business workflows. That means designing the chain around the model, not just calling an API: retrieval and hybrid search, agents and tool use, guardrails and prompt-injection hardening, evaluation that catches quality drift, and the token, cost, and latency work that decides whether any of it actually ships. I've been building this in the open:- bedrock-genai-labs: 26 runnable labs against live Amazon Bedrock APIs: a FAISS vector store built from scratch, hybrid dense + BM25 retrieval with reranking, an agent loop written by hand before rebuilding it on the Strands Agents SDK, Bedrock Guardrails, PII redaction, and LLM-as-judge evaluation. Python, boto3.- Contract Lens: a multi-tenant SaaS where an LLM extraction pipeline turns PDF and DOCX contracts into typed, structured data that drives a deadline and alert system. Versioned prompt configs, two-model routing by task shape, AES-256 encryption at rest, 5-role RBAC.- Multi-Agent Trading Desk: 12 LLM analyst agents on a LangGraph + FastAPI backend driving rebalancing and backtesting over a portfolio, with a Next.js frontend and live broker integration. I'm currently working toward the AWS Certified Generative AI Developer - Professional certification, and my team placed 3rd at the Hack-Nation Global AI Hackathon among 2,000+ participants. The foundation under all of it: 11 years shipping production software, most recently at Dialpad, where I drive the technical development and scaling of a high-traffic web platform serving millions of users. That's the part that doesn't come from a course. Knowing what breaks at scale, what costs money, and what it takes to keep something running after launch.

Experience

Dialpad

4 years 3 months

Senior Web Developer

May 2025 - Present (1 year 4 months)

Drive the technical development and scaling of Dialpad's global web presence, managing a high-traffic ecosystem that serves millions of users. I prioritize robust architecture and peak performance to successfully support rapid, enterprise-scale growth.

Web Developer

June 2022 - May 2025 (3 years)

Monks

Senior Software Engineer

June 2021 - February 2022 (9 months)

As a Senior Software Engineer, I developed high-performance web solutions for major digital platforms, including a low-code drag-and-drop page builder with Angular for mobile storefronts and web showcases for Google Chromecast, focusing on seamless interactivity and cross-device performance.

R/GA

Software Engineer

August 2020 - June 2021 (11 months)

Buenos Aires

Built high-performance landing pages for Google's Small Business initiatives, enhancing experience for millions of visitors monthly. Ensured peak performance and WCAG compliance for high-traffic systems.

Digital Beings

Full-Stack Engineer

July 2019 - August 2020 (1 year 2 months)

As a Full-Stack Engineer, I built a modular platform for interactive mobile narratives using Angular and Node.js, creating a scalable architecture for app-like experiences within messaging feeds, focusing on performance and extensibility.

Globant

Web Developer

March 2018 - July 2019 (1 year 5 months)

Argentina

Co-engineered JPMorgan's financial infrastructure modernization, migrating core interest calculation from ActionScript to Angular, refactoring interfaces for WCAG compliance and accessibility.

Logismata

Ingeniero de software

June 2017 - March 2018 (10 months)

Engineered FinTech and PropTech solutions for the Swiss financial sector, working with the team to develop high-performance web apps using Angular and TypeScript. Focused on scalable modules for financial planning, tax, and real estate, optimizing data accuracy and user experience.

MRM

Web Developer

March 2014 - June 2017 (3 years 4 months)

Argentina

Built data-driven digital experiences for the automotive sector, including the promotional rewards platform for GM's "GM Card" program. Used AngularJS to create high-performance, interactive web tools for the US market, allowing users to easily track cardholder earnings and vehicle benefits while boosting customer loyalty.

HP

Java Web Developer

January 2011 - October 2012 (1 year 10 months)

Argentina

Delivered large-scale telecom web solutions at HP's enterprise division, launching a nationwide interactive mobile platform in Nextel stores for thousands of users. Used J2SE, JBoss Seam, JSF, and JavaScript to develop and maintain robust workflows for multi-million endpoint environments.

Education

Universidad de Buenos Aires

Bachelor's Degree in Data Science, Procesamiento de datos · (March 2023)

Digital House

Data Scientist, Ingeniería de software · (2018 - 2019)

Universidad de Buenos Aires
