Software Engineer with 11+ years shipping production software, now moving deliberately into AI engineering: taking LLMs into production and integrating them into real business workflows. That means designing the chain around the model, not just calling an API — retrieval and hybrid search, agents and tool use, guardrails and prompt-injection hardening, evaluation that catches quality drift, and the token, cost and latency work that decides whether any of it actually ships. The foundation under it is 11 years of high-traffic platform engineering, most recently at Dialpad, serving millions of users.

Key Skills

GenAI and LLM: Retrieval-Augmented Generation (RAG), Multi-Agent Systems, Agents and Tool Use, Prompt Engineering, Guardrails and Prompt-Injection Hardening, LLM Evaluation (LLM-as-Judge), PII Redaction, Vector Search, Hybrid Retrieval (dense + BM25), Reranking, Token, Cost and Latency Optimization

Cloud: Amazon Web Services (AWS), Amazon Bedrock

Frameworks and Libraries: LangGraph, Strands Agents SDK, FastAPI, FAISS, boto3, Next.js, Angular, Node.js

Languages: Python, TypeScript, JavaScript

Engineering: Enterprise Architecture, Multi-Tenant SaaS, High-Traffic Web Platforms, Performance Optimization, RBAC, WCAG Accessibility

Projects

bedrock-genai-labs

- 26 runnable labs against live Amazon Bedrock APIs, built in Python and boto3.
- FAISS vector store built from scratch, with hybrid dense + BM25 retrieval and reranking.
- Agent loop written by hand before rebuilding it on the Strands Agents SDK.
- Bedrock Guardrails, PII redaction and LLM-as-judge evaluation.

Contract Lens

- Multi-tenant SaaS where an LLM extraction pipeline turns PDF and DOCX contracts into typed, structured data driving a deadline and alert system.
- Versioned prompt configs with two-model routing by task shape.
- AES-256 encryption at rest and 5-role RBAC.

Multi-Agent Trading Desk

- 12 LLM analyst agents on a LangGraph + FastAPI backend, driving rebalancing and backtesting over a portfolio.
- Next.js frontend with live broker integration.

Professional Experience

Dialpad

05/25 - Present

Senior Web Developer

- Drive the technical development and scaling of Dialpad's global web presence, managing a high-traffic ecosystem that serves millions of users.
- Prioritize robust architecture and peak performance to successfully support rapid, enterprise-scale growth.

Dialpad

06/22 - 05/25

Web Developer

- Built and maintained high-traffic pages and reusable components across Dialpad's global web platform.

Monks

06/21 - 02/22

Senior Software Engineer

- Developed high-performance web solutions for major digital platforms.
- Created a low-code drag-and-drop page builder with Angular for mobile storefronts.
- Built web showcases for Google Chromecast focusing on seamless interactivity and cross-device performance.

R/GA	08/20 - 06/21
Software Engineer	
- Built high-performance landing pages for Google's Small Business initiatives. - Enhanced experience for millions of visitors monthly. - Ensured peak performance and WCAG compliance for high-traffic systems.	
Digital Beings	07/19 - 08/20
Full-Stack Engineer	
- Built a modular platform for interactive mobile narratives using Angular and Node.js. - Created a scalable architecture for app-like experiences within messaging feeds. - Focused on performance and extensibility.	
Globant	03/18 - 07/19
Web Developer	
- Co-engineered JPMorgan's financial infrastructure modernization. - Migrated core interest calculation from ActionScript to Angular. - Refactored interfaces for WCAG compliance and accessibility.	
Logismata	06/17 - 03/18
Software Engineer	
- Engineered FinTech and PropTech solutions for the Swiss financial sector. - Developed high-performance web apps using Angular and TypeScript. - Focused on scalable modules for financial planning, tax, and real estate. - Optimized data accuracy and user experience.	
MRM	03/14 - 06/17
Web Developer	
- Built data-driven digital experiences for the automotive sector. - Developed the promotional rewards platform for GM's "GM Card" program. - Used AngularJS to create high-performance, interactive web tools for the US market. - Enabled users to track cardholder earnings and vehicle benefits, boosting customer loyalty.	
HP	01/11 - 10/12
Java Web Developer	
- Delivered large-scale telecom web solutions at HP's enterprise division. - Launched a nationwide interactive mobile platform in Nextel stores for thousands of users. - Used J2SE, JBoss Seam, JSF, and JavaScript to develop and maintain robust workflows for multi-million endpoint environments.	

Education

Universidad de Buenos Aires	03/23
Bachelor's Degree in Data Science	
Digital House	2018 - 2019
Data Scientist	
Universidad de Buenos Aires	2010 - 2013
Bachelor of Computer Science	

Certifications, Awards and Languages

Certification: AWS Certified Generative AI Developer - Professional (in progress)
Award: 3rd Place Globally, Hack-Nation Global AI Hackathon (2,000+ participants)
Languages: Spanish (Native), English (Bilingual), German (Elementary)
