

Santiago Paz

Senior Full-Stack Engineer | TypeScript, React, Next.js and Node.js

Berlin, Germany | santiago.paz.1992@gmail.com | +49 171 8486760

linkedin.com/in/santiago-paz | github.com/santiago-paz | santiagopaz.com

Full-stack engineer in TypeScript, React, Next.js and Node.js, with **13 years shipping production software**. At Dialpad that means ~1,900 Next.js pages in five locales and a visual blog builder. I shipped three products solo on the side, including **Contract Lens**, a multi-tenant SaaS on PostgreSQL. Berlin, on-site or hybrid; **Italian citizen, no visa step**.

Key Skills

Frontend: TypeScript, React, Next.js (App Router), Tailwind, Visual Page Builders, Web Performance, Accessibility (WCAG), SEO, Localization (five locales)

Backend and Data: Node.js, GraphQL, REST API Design, PostgreSQL, Prisma, MongoDB, Data Modelling, Multi-Tenant SaaS, Role-Based Access Control, Encryption at Rest

Platforms and Tools: Vercel, Amazon Web Services (AWS), Contentful, Git, Vitest

Product Ownership: Ambiguous Problem to Shipped Product, End-to-End Feature Ownership, Product and Design Collaboration, Content Modelling, Legacy Platform Migration

AI in Products and Tooling: LLM APIs, Vercel AI SDK, Structured Extraction from Documents, Human-in-the-Loop Approval, Claude Code (custom skills, subagents, several agents in parallel)

Professional Experience

Dialpad

05/25 - Present

Senior Web Developer

- Build and ship pages across dialpad.com, a Next.js App Router site on Vercel with a Contentful back end: ~1,900 pages, five locales, millions of visitors.
- Write GraphQL queries against Contentful, and work on the schemas and resolvers of a GraphQL layer the team owns.
- Built most of a WYSIWYG blog builder in Next.js and TypeScript, now live. Editors compose posts from modular blocks, and each block's form comes from its Contentful content model, so a new field rarely needs UI work and non-engineers ship without a release.
- Built AI drafting with the Anthropic SDK: Claude streams an outline and then the full text, and the editor approves it before it lands as editable blocks.
- Work in TypeScript, React and Tailwind alongside Product, Design and Content. Performance, SEO and accessibility are release criteria.

Dialpad

06/22 - 05/25

Web Developer

- Built and maintained high-traffic marketing pages across Dialpad's global web platform.

Monks

06/21 - 02/22

Senior Software Engineer

- Created a low-code drag-and-drop page builder in Angular, so non-engineers could assemble mobile storefronts.
- Built web showcases for Google Chromecast that had to stay fast and interactive across devices.

R/GA

08/20 - 06/21

Software Engineer

- Built marketing pages for Google's Small Business initiatives (smallbusiness.withgoogle.com) in AngularJS, reaching millions of visitors monthly.
- Built a WYSIWYG page builder that let the team assemble campaign pages without engineering time.

Digital Beings

07/19 - 08/20

Full-Stack Engineer

- Built the platform behind Wrap (wrap.co) from scratch at an early-stage company: app-like interactive content that runs inside messaging feeds with no app install.
- MEAN stack throughout: MongoDB, Express, Angular and Node.js services, with user, team and permission management.
- Modular architecture, so new content formats could be added without touching the generator.

Globant

03/18 - 07/19

Web Developer

- Co-engineered JPMorgan's migration from a legacy ActionScript system to a full Angular platform.
- Rebuilt stock calculation interfaces used by brokers, on top of the bank's existing back end.

Earlier Experience

Logismata

06/17 - 03/18

Software Engineer. FinTech and PropTech modules for the Swiss financial sector: financial planning, tax and real estate, in Angular and TypeScript.

MRM

03/14 - 06/17

Web Developer. Promotional rewards platform for GM's "GM Card" program in the US market, built in AngularJS.

HP

01/11 - 10/12

Java Web Developer. Large-scale telecom workflows for HP's enterprise division, in J2SE, JBoss Seam and JSF.

Products Built End to End

Contract Lens · trycontractlens.com · github.com/santiago-paz/contract-lens

- Contract intelligence for small German law firms. A PDF or DOCX goes in, and an LLM extraction step returns parties, dates, clauses and renewal terms as typed data that drives deadlines and alerts.
- Sole engineer across the stack and every product decision: Next.js and React front end, TypeScript throughout, and a Prisma and PostgreSQL data model.
- Multi-tenant with 5-role RBAC and AES-256-GCM encryption at rest. Localized EN/DE.

Reema · reema.ar

- Deployed SaaS that adds an embeddable "listen to this article" player to blogs and digital media, built as four services: dashboard, synthesizer, marketing site and player.
- Text-to-speech from ElevenLabs, Google Cloud TTS and Azure, with HTML to SSML conversion and audio caching. Next.js, TypeScript, Prisma and PostgreSQL.

Multi-Agent Trading Desk · trading-desk.santiagopaz.com · github.com/santiago-paz/multi-agent-trading-desk

- My own Next.js, React and TypeScript app on a live broker API: the desk UI, the broker integration, a symbol translation layer and a rebalance engine. No order goes out until a human confirms it.
- Its analyst back end is a fork of the open-source ai-hedge-fund project, and the LangGraph agent panel is upstream work. My 72 Python commits there, with tests, added backtesting against a simulated broker and a rebalancer.

Awards and Assessments

Award: 3rd Place Globally, Hack-Nation Global AI Hackathon (2,000+ participants)

Assessment: TestGorilla React / Node / AI / Python - 86th percentile overall, 91st in Node.js, 99th in Artificial Intelligence

Education

Digital House

2018 - 2019

Data Science Program (completed)

Universidad de Buenos Aires

2010 - 2023

Computer Science, then Data Science (both unfinished)

Languages

Spanish (Native), English (Professional Working), German (Elementary)
